### **DETAILED ACTION**

Note that the last action has been vacated in favor of this action due to an error on the previous Office Action Summary. The period for reply has been corrected to 1 month.

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 28-39, drawn to methods of generating an antibody and compositions comprising such antibodies, including compositions comprising specific antibodies.

Group II, claim(s) 40-45, drawn to methods of using specific antibodies for treatment and PrPsc detection.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Claims 29-34 is directed to an invention which lacks novelty. More specifically, lipid raft immunization is taught by the prior art; see cited reference WO 03/048302 (hereinafter as "Tso"). See page 6 in which the descriptions of the figures provide different lipid raft hybridomas to multiple cancer lines. Separately, Applicants provided additional prior art that is related to the claimed invention. It is noted that prion proteins are localized to such rafts as described by Enari (2001-cited) and Bosque and Prusiner (2000-cited) provide that

ScN2a is the most useful cell line for studying the cell biology of prion replication (see Introduction). Thus, no special technical feature exists for the Groups I and II as defined by PCT Rule 13.2, because it does not define a contribution over the prior art. Note that PCT Rule 13 does not provide for multiple products or methods within a single application. Because the technical special feature of the Groups is not a special technical feature, unity of invention is lacking.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during

prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
